

A914 wheeled excavator NZG 1:50

Weighing in between 15 to 17 tonne, the Liebherr A914 wheeled excavator is a recent addition to the range, offering excellent operator comfort from the newly developed cabin while setting the standard in its class for fuel efficiency and travel performance with all components, from the engine, hydraulics, electronics, swing drive and steel structure all developed in house for exceptional reliability and long service life.

The A914 wheeled excavator is another good release from NZG with plenty of fine detailing. The undercarriage

Right, Above and Below: *With excellent hydraulic hose replication, detachable bucket and great cab detailing, the A914 is an excellent addition to the wheeled excavator model fleet.*

The Good

Good reproduction of the hydraulic hoses.

The Not so Good

None to report.

TPM Verdict

has a working dozer blade with two lowering outriggers and a steering axle with freely rotating double mounted tyres fitted. The cabin interior has been captured with the seat and operator controls visible through the clear glazed windows which have printed window seals. The two section hydraulically adjustable boom and stick offer a good range of movement with a LIKUFIX quick coupler fitted to the stick allowing

the bucket to be detached. All the hydraulic piping has been authentically added with

a very good paint finish and crisp printing of the engine grilles and Liebherr markings.
