

Above: The spacious cabin has a modelled interior with exterior mirrors, lights and wiper.

L506 Compact wheel loader NZG 1:50

The L506 Compact wheel loader is a new machine concept combining power and flexibility with maximum stability and tipping safety. Powered by the Liebherr 4TNV98 4-cylinder diesel engine delivering 61hp, the machine is very nimble with stepless hydrostatic 4 wheel drive, oscillating centre pivot articulating steering and a spacious and comfortable easy access cabin with exceptional visibility of the work area.

The 1:50th scale model

from NZG has captured the looks of this diminutive loader very well, from the articulated chassis which offers a good range of steering movement with underside detailing, rotating wheels with accurately moulded rubber tyres to the tapered design of the loader arms which offer better visibility, with a good range of height and bucket tipping motion. The

cabin interior has been authentically captured with plenty of clear glazing throughout. The paint finish is of a high standard with replicated Liebherr markings.

Right and Below: NZG have accurately captured the range of movement of the full sized machine perfectly.
